WEEBER & DON'S Novelties and Specialties in Vegetable Seeds FOR 1911

51 The Don Tomato

EXTRA EARLY FORCING

This grand variety possesses all the qualifications to enable us to state that it is the best forcing Tomato ever offered. The fruit is of medium size, dark red in color, very smooth, solid, and almost globe shaped. The plants form 3 to 6 stalks, and average 6 feet in height with comparatively very little foliage. It is remarkable for its bearing qualities; the plants are covered with clusters of fruit averaging from 5 to 9 Tomatoes in each cluster, bearing right down to the bottom of the stems. It is also very valuable for first crop outside planting. Pkt. 25c.

W. & D.'s "Seth Low" Musk Melon

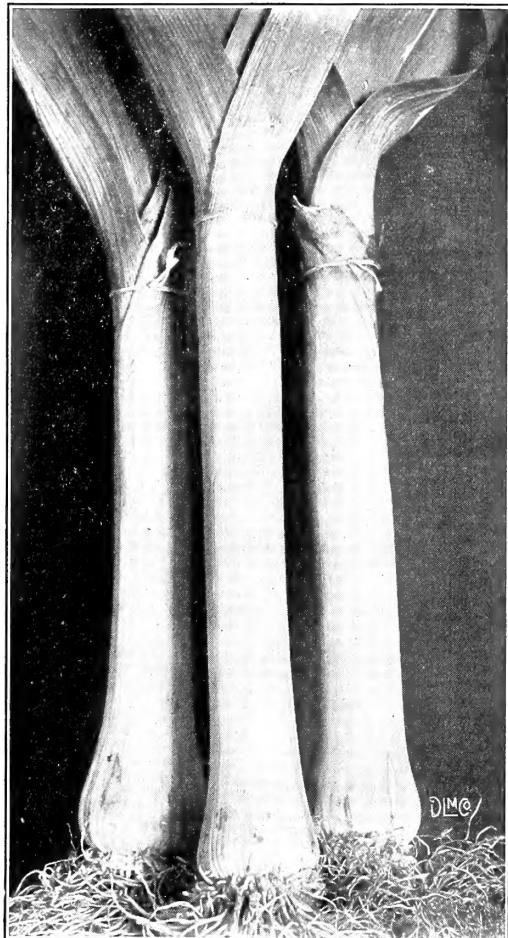

This excellent Melon we can confidently recommend as one of the best varieties grown, and those of our customers who have tried it speak highly of its qualities both as regards flavor, shape, and prolificness. In appearance it is very attractive, nearly round in form, with greenish yellow skin, slightly netted, and deeply ribbed, averaging in weight from 7 to 10 lbs. The flesh is rich salmon color, very deep, with an unusually thin rind. We consider this variety a valuable addition, either for growing under glass or in the open, and as a Melon to answer both purposes it has no equal. Pkt. 15c.

W. & D.'s First and Best Cauliflower

This is the earliest of all Cauliflowers. For forcing under glass during Winter and Spring, First and Best is peculiarly well adapted, from its dwarf growth and short outer leaves, and for this purpose no other Cauliflower is now so largely grown. Pkt. 50c., $\frac{1}{4}$ oz. \$2.50, oz. \$8.00.

W. & D.'s First and Best Cauliflower

W. & D.'s Giant Exhibition Leek

W. & D.'s Giant Exhibition Leek

This splendid strain of Exhibition Leek is the largest in cultivation. The long, pure white stems have a most attractive appearance. It blanches well, is of superior quality, and for exhibition purposes it has no equal. Pkt. 25c.

W. & D.'s Prolific Forcing Bean

This excellent Forcing Bean is of dwarf compact habit, exceedingly prolific and very early. The pods are long and fleshy, very tender, and of excellent flavor. We confidently recommend this variety for forcing. Pkt. 30c., qt. 50c.

Weeber & Don's Novelties and Specialties in Vegetable Seeds

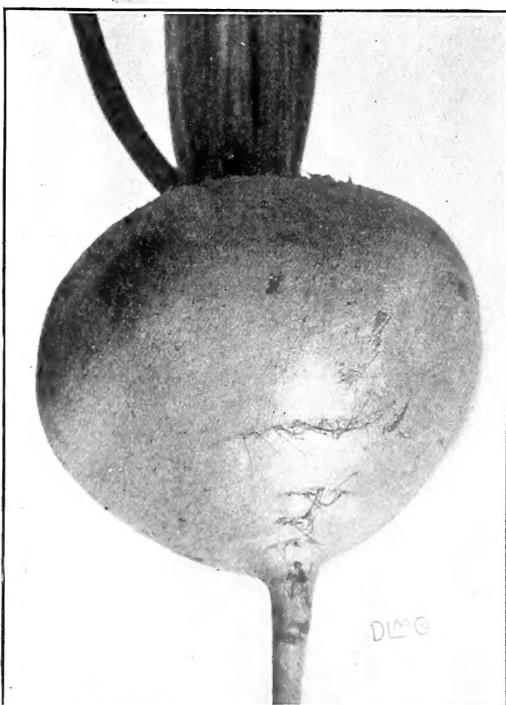

Brechin Castle Brussels Sprouts

W. & D.'s Brechin Castle Brussels Sprouts

This excellent variety has proved to be a decided advance on anything yet offered, and we have had numerous testimonials from our customers as to its value. The plants are of medium height, vigorous in growth, and entirely covered with solid dark green sprouts, very tender and of excellent flavor. Pkt. 25c.

Half-Long Blood Beet

A distinct variety, and we consider it the best for Winter use. The flesh is rich dark red, very sweet, crisp and tender, never becoming woody. It retains its good qualities longer than other sorts. Pkt. 5c., oz. 10c., $\frac{1}{4}$ lb. 25c., lb. 70c.

Early Model Beet

Asparagus Giant Argenteuil

This French variety grows to a large size, is very vigorous and free from rust, and the flavor is excellent. Pkt. 10c., oz. 15c., $\frac{1}{4}$ lb. 30c.

Butterfly Runner Bean

This variety is equal to the old kinds in productiveness and quality, but is quite distinct, and far surpasses the others in the beauty of its flowers. It is chiefly distinguished by the large size of the prettily waved and many white wings, and its salmon and rose standards. Pkt. 5c., $\frac{1}{4}$ lb. 30c.

"Leviathan" Pole Lima Bean

This variety is the earliest yet offered. The pods which are produced in clusters are long, straight, and contain 4 to 5 good-sized flat beans, which are of excellent quality. It is a continuous bearer and can always be depended upon for producing a good crop. Pkt. 10c., pt. 25c., qt. 40c., pk. \$2.50.

Burpee-Improved Bush Lima Bean

The earliest, largest and the best of all Bush Limas. The sturdy bushes are all loaded with pods that are truly enormous in size. The luscious green beans are larger than any Lima ever known before. Pkt. 10c., pt. 25c., qt. 40c.

Early Model Beet

This variety will be highly appreciated both for forcing and growing outside. The shape is nearly round, and color of flesh a rich deep red. The quality is most excellent, being sweet, tender, and free from coarseness. The tops are quite small, making it a fine variety for forcing in hotbed. Pkt. 10c., oz. 15c., $\frac{1}{4}$ lb. 40c., lb. \$1.25.

Short Stem Drumhead Cabbage

This early Cabbage is remarkable for its dwarf, compact growth, and uniform heading. It has a very short stem, the heads appear to rest on the surface of the soil. It grows to a large size, and the outer leaves fold closely about the heads which are very solid and of excellent quality. Pkt. 10c., oz. 30c., $\frac{1}{4}$ lb. \$1.00.

White Plume Celery

The White Plume is so widely known, it does not require an extended description. It is the most popular of all the white varieties. Its principal qualities are vigor, size, and at the same time being of good flavor, crisp and tender. Our stock of this variety is most carefully selected. Pkt. 10c., oz. 35c., $\frac{1}{4}$ lb. \$1.00.

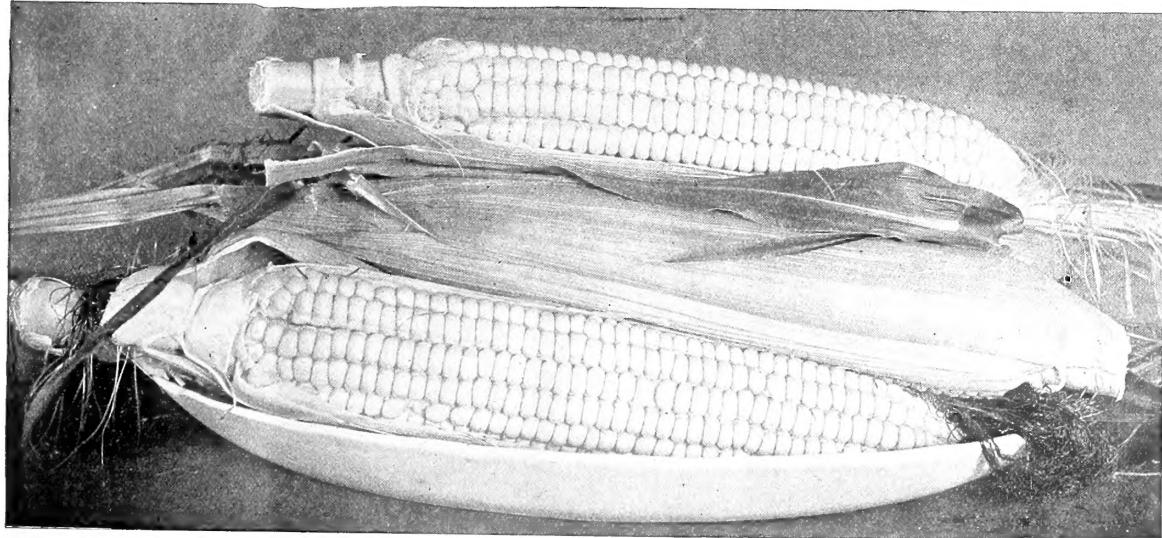

Improved Jersey Wakefield Cabbage

The Don Extra Early Sweet Corn

This Sweet Corn has proved superior to all other early sorts. It is as early as the Cory, with ears measuring from 8 to 10 inches long. The grains are pure white, sweet and tender, and have from 10 to 12 rows on each cob. Our private gardeners claim that for large size, earliness and productiveness it has no equal. Weeber & Don's Novelties and Specialties in Vegetable Seeds

Witloof Chicory

Esteemed as a salad plant. Spring-sown seeds produce long Parsnip-like roots by Fall, when they are taken up, the leaves cut off and the roots then trenched and covered with soil eight inches over the crowns. Over this is placed a two-foot layer of fresh manure, which induces a new growth of blanched leaves, folded in the form of Cos Lettuce. These are removed as required during the Winter, and eaten raw as salad. Pkt. 5c., oz. 15c., $\frac{1}{4}$ lb. 40c., lb. \$1.25.

Long Island Beauty Sweet Corn

This variety is considered by many as the best of the second early sorts. The ears, of excellent quality, are shorter, but thicker than Early Mammoth, and ripen about a week earlier. Pkt. 15c., qt. 25c., pk. \$1.50.

The Davis Perfect Cucumber

This variety is the best of recent introduction, both for forcing and growing out-of-doors. Shape slim and symmetrical, color dark, glossy green, with an average length of 10 to 12 inches. Its excellent eating qualities, shape, color and productiveness place it without a rival. Pkt. 5c., oz. 15c., $\frac{1}{4}$ lb. 35c., lb. \$1.25.

New York Spineless Egg Plant

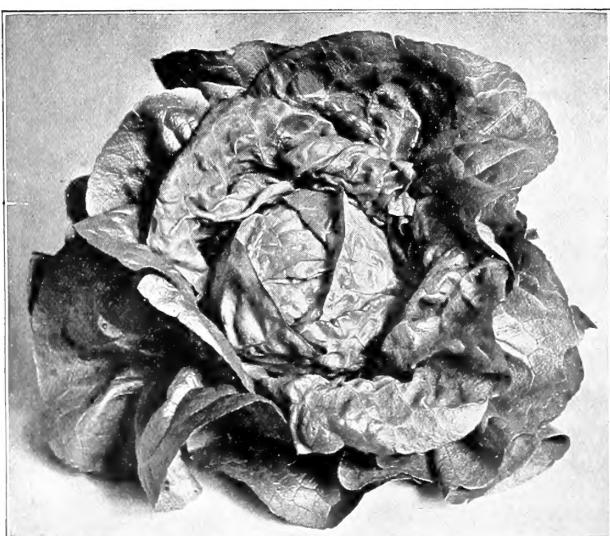

A general favorite, both for market and private use. The fruit is very large and oval shaped, color a splendid dark purple. The plants usually bear four to eight large fruits of excellent quality. Our stock is grown and selected with the greatest care. Pkt. 10c., oz. 40c., $\frac{1}{4}$ lb. \$1.50, lb. \$5.00.

Ideal Lettuce

Egg Plant, Black Beauty

Variegated Kale

Ideal, Forcing Lettuce

As a Lettuce for growing under glass, Ideal, in our opinion, is far ahead of anything yet sent out, and we have received most gratifying reports from customers who have already grown it. It possesses all the good qualities of May King, but comes into use much earlier and forces better than that favorite sort. We have every confidence in recommending it as the best Lettuce of this class. Pkt. 25c.

Mignonette Lettuce

A small, early, compact-growing variety. The plants spread only about seven inches, thus enabling them to be closely planted. Very hardy, and does not run to seed. Pkt. 10c., oz. 25c., $\frac{1}{4}$ lb. 75c.

Grand Rapids Forcing Lettuce

Beautifully crumpled and curled, tender and delicious, excellent forcing variety. Pkt. 5c., oz. 20c., $\frac{1}{4}$ lb. 50c., lb. \$1.50.

MUSHROOM SPAWN

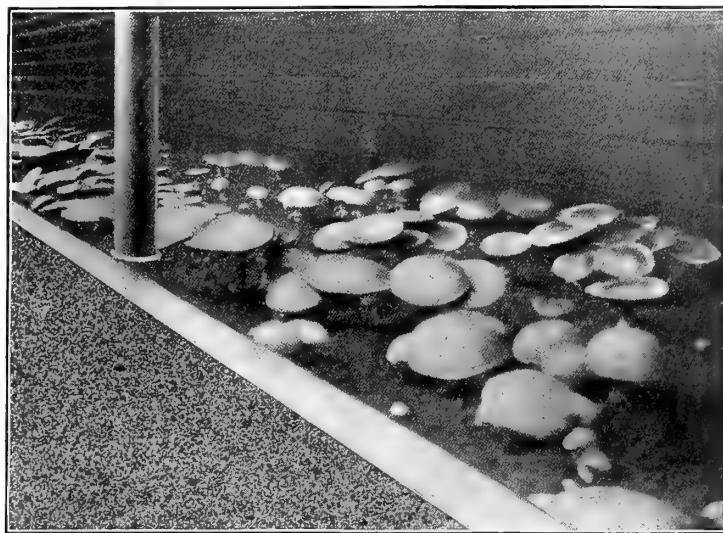

German, *Champignon*. French, *Champignon*. Spanish, *Seta*. *Ten pounds will spawn 20 feet square.*

CULTURAL DIRECTIONS.—Collect sufficient fresh horse droppings to form the desired size of bed, spreading them out in an airy shed to dry, and turning them frequently. When in a proper state as to dryness, which will soon be learned by experience, make these into a bed from nine inches to one foot thick, beating them firmly together. If the droppings have been properly prepared, gentle fermentation will soon commence, and when the temperature of the bed is from 75 degrees to 80 degrees, with no danger of it rising higher, put in the spawn. This is done by making shallow holes about nine inches apart, inserting pieces of spawn about the size of a hen's egg and covering with the dung, pressing this closely about the spawn. It is of the greatest importance that the temperature of the bed should not decline below 75 degrees, nor rise above 80 degrees for a month after spawning. Within a fortnight after putting in the spawn, cover the bed about two inches thick with good, mellow, moist soil, making this firm; and if under this a covering one or two inches thick of cow dung, in about the same state as to moisture as the soil, can be afforded, this will cause the bed to last longer, and also to produce a larger crop than if covered with soil only. The most suitable temperature for beds in bearing is 50 degrees to 55 degrees and as a high temperature causes the mushrooms to come small, this should be avoided. Watering beds in bearing often causes the small mushrooms to damp off; therefore, water only when the bed ceases to be productive, and then use the water about the same temperature as the bed.

MARIGOLD H. H. A.

These handsome half-hardy annuals do best in moderately rich soil and in open situations, and are strongly recommended where a gorgeous display in the Autumn is an essential feature. The African varieties produce large self-colored blossoms on tall plants; the French are smaller, some of the varieties being elegantly striped and spotted.

Mignonette has been immensely improved in size, and several distinct tints have been saved with such care that a bowl of different varieties of Mignonette is a charming sight and much less used as an ornament than it should be. PANSY, or HEART'S-EASE H. H. B.

Pansies do best in a light, rich soil and a partially shady, cool and moist situation. Under such ideal conditions they will produce the very largest and most perfect flowers; but nevertheless, they will give good returns if planted in almost any soil. In full exposure to the sun it is well to mulch the beds and water freely. Plants may be kept in bloom all Summer by removing the faded flowers every few days, to prevent seeding. For early Spring bedding, seed may be started in July to September, and plants kept in coldframes over Winter, or they can be set out in beds in the Fall and wintered nicely by giving a protection of leaves or salt hay. Spring sowings should be made early, so as to get the plants well established before the hot weather. Our strains are carefully selected and unexcelled.

SWEET PEAS

Of late years Sweet Peas have been greatly improved in type, size of flowers and beauty of colors, adding very much to their popularity. The Spencer or Orchid-flowering type has appeared in many new shades, out-classing some of the standard sorts of similar colors by their large, bold and wavy flowers. The blooms, often measuring two inches across, are borne three and four on long, stiff stems. We have discarded many of the older varieties, to give place to the new and larger flowering sorts of similar colors, and the list offered below we can recommend with every confidence.

CULTURAL DIRECTIONS: Sow in the Spring as soon as the ground can be prepared in a deep, rich soil and for succession until the middle of April. Open a drill 4 to 5 inches deep, and cover the seed from 2 to 3 inches. As the vines grow up, draw the soil up against them for support. A row of brush or wire netting should be placed between them for the vines to trail on. Pick flowers closely and do not allow to go to seed.

Weeber & Don's Extra Selected Mixed Sweet Peas.

A truly superb mixture blended by us with extraordinary care from named varieties of the most approved large-flowered type, including recent American and European novelties, as well as a great many Spencer and Unwin sorts and other Hybrids as yet unnamed, insuring a gorgeous color effect.

DOUBLE LARGE-FLOWERED

The strains offered under this heading are the very finest and saved from pot plants. The seed will produce about 30 to 40 per cent. of extremely large, well-formed, densely double flowers, the balance being singles of the large-flowered type. As the double sorts do not produce seed, the single flowers must be pollinated with the pollen of the double ones, which accounts for the small percentage of double flowers. *We would advise to select all the weaker seedlings in pricking off, as they invariably produce the finest double flowers.*

COMPRESSED AIR SPRAYERS

Auto Compressed Air Sprayer No. 1

This is without a doubt the standard of all Compressed Air Sprayers. It consists of a four-gallon reservoir, made of heavy material, either Brass or Galvanized Steel as ordered. It is operated by working an Air Pump, with which air is compressed on top of the solution. A few strokes of the plunger will compress enough air to operate the machine several minutes and two pumpings will discharge all of the contents. This sprayer is made of heavy material throughout, and the Brass machine, which we strongly recommend, is practically indestructible, because it cannot be affected by the various spray solutions. No other Sprayer will do such a variety of work, and do it so well. The cut shows the Air Chamber and Reservoir, also Auto Pop Nozzle. Fill the Reservoir not more than two-thirds full with the solution, insert the air pump at the end of the can, and all is ready for use.

Price Brass Tank	\$6.75 each.
Galvanized Steel Tank	5.00 each.
